

to whom it may concern:i get a great value from the services i pay for at my satellite radio provider, whether it is XM or Sirius. this is no different than cable tv, so i demand that the government stay out of it! i pay for the service and no one has the right to stop this passing of information.

i want to continue to receive weather, traffic and other information that our great country's technology affords us.

thank you for this opportunity. i am an engineer, a university professor and a business owner. oh yeah and i vote voraciously too.
